Starting up

Hi! Welcome to the demo of pdfpc, a PDF presentation tool.

Setting up

I assume you have opened this presentation with pdfpc itself. You may have one of these cases:

- ▶ The main presentation and the presenter view are on the correct screens
 - ▶ you are ready to go!
- ▶ The main presentation and the presenter view have the monitors swapped
 - ▶ restart pdfpc with the `-s` option
- ▶ You are viewing this on a single monitor
 - ▶ you are currently on the presenter view. You can get a good feeling of what pdfpc is good for, but you will have to take my word for some of the features
 - ▶ alternatively, restart pdfpc in the windowed mode with the `-w` option

The presenter view

The presenter view is the one on your monitor, visible only to the presenter

- ▶ It shows the current and next slides
- ▶ It shows how long the presentation is running
 - ▶ With the `-d <min>` option it shows a countdown timer
- ▶ It shows the current slide number and the total number of slides
- ▶ It shows overlay information (see next slide)
- ▶ It shows some additional status information (we will see it later)

Of course, the presentation view only shows the current slide

- ▶ You probably have guessed by now, but for moving forward you can use one of , , ,  (Enter/Return), , and the left mouse button
- ▶ Likewise you can use , , ,  (Backspace) or the right mouse button for going back
- ▶ Pressing  (Shift) together with  or  causes the movement to jump in 10-slide steps forward or backward, respectively

Overlays

- ▶ Some people like overlays in their presentations

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise
- ▶ pdfpc supports such slides:

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise
- ▶ pdfpc supports such slides:
- ▶ Note the two miniatures below the current slide

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise
- ▶ pdfpc supports such slides:
- ▶ Note the two miniatures below the current slide
- ▶ Note also that the slide counter shows the correct slide number

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise
- ▶ pdfpc supports such slides:
- ▶ Note the two miniatures below the current slide
- ▶ Note also that the slide counter shows the correct slide number
- ▶ The 10-jump keys mentioned in the previous slide also support overlays

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise
- ▶ pdfpc supports such slides:
- ▶ Note the two miniatures below the current slide
- ▶ Note also that the slide counter shows the correct slide number
- ▶ The 10-jump keys mentioned in the previous slide also support overlays
- ▶ If you are fed up with this overlay, you can jump to the next slide with  + 

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise
- ▶ pdfpc supports such slides:
- ▶ Note the two miniatures below the current slide
- ▶ Note also that the slide counter shows the correct slide number
- ▶ The 10-jump keys mentioned in the previous slide also support overlays
- ▶ If you are fed up with this overlay, you can jump to the next slide with  + 
- ▶ Really you should skip to the next slide now

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise
- ▶ pdfpc supports such slides:
- ▶ Note the two miniatures below the current slide
- ▶ Note also that the slide counter shows the correct slide number
- ▶ The 10-jump keys mentioned in the previous slide also support overlays
- ▶ If you are fed up with this overlay, you can jump to the next slide with  + 
- ▶ Really you should skip to the next slide now
- ▶ Nothing interesting is coming here

Overlays

- ▶ If you are fed up with this overlay, you can jump to the next slide with  + 
- ▶ Really you should skip to the next slide now
- ▶ Nothing interesting is coming here
- ▶ I just wanted to make a point that too long overlays may be boring
- ▶ Come on, nothing to see here!

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise
- ▶ pdfpc supports such slides:
- ▶ Note the two miniatures below the current slide
- ▶ Note also that the slide counter shows the correct slide number
- ▶ The 10-jump keys mentioned in the previous slide also support overlays
- ▶ If you are fed up with this overlay, you can jump to the next slide with  + 
- ▶ Really you should skip to the next slide now
- ▶ Nothing interesting is coming here
- ▶ I just wanted to make a point that too long overlays may be boring
- ▶ Come on, nothing to see here!
- ▶ I am not kidding!

Overlays

- ▶ Some people like overlays in their presentations
- ▶ i.e. slides that build up step-wise
- ▶ pdfpc supports such slides:
- ▶ Note the two miniatures below the current slide
- ▶ Note also that the slide counter shows the correct slide number
- ▶ The 10-jump keys mentioned in the previous slide also support overlays
- ▶ If you are fed up with this overlay, you can jump to the next slide with  + 
- ▶ Really you should skip to the next slide now
- ▶ Nothing interesting is coming here
- ▶ I just wanted to make a point that too long overlays may be boring
- ▶ Come on, nothing to see here!
- ▶ I am not kidding!
- ▶ Ok, you won

Movement

- ▶ Normal movement while *inside* an overlay jumps through each step in the overlay
- ▶  +  and  +  jump to the previous and next slide respectively, ignoring overlay steps
- ▶  +  and  +  jump to the beginning and end of the current overlay

Definition of overlays

- ▶ pdfpc tries to find the overlay information automatically by looking at the page numbers
- ▶ If the automatic detection does not work, you can define overlays with  +  on every slide composing an overlay

Jumping to specific slides

- ▶ Pressing **G** you can enter a slide number to jump to
 - ▶ To come back to this slide you can use the **↑** + **←** combination or remember that we are on slide 7.
- ▶ Pressing **⇐⇒** (Tab) or the middle mouse button you get an overview of the whole presentation, which you can use to jump around
- ▶ Press **M** to bookmark a present slide; press **↑** + **M** to return to it afterwards
- ▶ Hyperlinks also work, press here to jump to the first slide
- ▶ **Home** and **End** also work as expected

- ▶ Pressing **Ctrl** + **N** you can annotate slides (text only)
 - ▶ Try it now!
- ▶ Pressing **Esc** exits the note editing mode
- ▶ The notes are stored automatically
- ▶ The notes apply to all the slides in an overlay

Controlling the presentation view

- ▶ Pressing **F** you can freeze the presentation view, i.e. slide movement does not reflect on the presentation view
 - ▶ This is useful if you want to search for some slide without confusing the audience with quick slide flipping
- ▶ Pressing **B** you can fade to black the presentation view
 - ▶ This is useful e.g. if you are using slides and a blackboard at the same time
- ▶ Pressing **H** will entirely hide the presentation view
 - ▶ This can be useful for showing a different application during the presentation
- ▶ Pressing again any of the **F**, **B** or **H** keys undoes the respective presentation view change. Alternatively, hit **Esc** to return to the regular state
- ▶ The presenter view shows some icons reflecting the current status

Controlling the clock

- ▶ With **S** you can start the clock at the beginning of the presentation
 - ▶ Note that the clock also starts automatically when moving slides
- ▶ With **P** you can pause the clock
 - ▶ Useful for rehearsal talks
- ▶ With **Ctrl** + **T** you can reset the timer

Annotation modes

- ▶ pdfpc has a built-in “laser” pointer. To switch the pointer mode on, press 2
 - ▶ The pointer size can be adjusted with the + and - keys
 - ▶ A rectangular area can be highlighted by using the drag mouse motion
- ▶ Press 3 to enter the drawing mode with the pen tool selected
 - ▶ Again, use + and - to alter the size of the drawing tool
- ▶ Press 4 to use the eraser tool, if needed
 - ▶ Or you can clear the entire current-page drawing with C
- ▶ Press 1 to return to the normal presentation mode
- ▶ The drawings will stay on the slides you made them
 - ▶ Press D to toggle them on/off globally
- ▶ The drawings will **not** be saved when you exit pdfpc

Overwhelmed with the key bindings to memorize? Fear not!

- ▶ Press  to invoke the toolbox
 - ▶ On tablet devices, it is enabled by default
- ▶ Use its handle to drag around the screen
- ▶ The first button minimizes/restores the toolbox
- ▶ The next four buttons switch between the normal, pointer, pen, and eraser modes
 - ▶ In the drawing modes, more controls will appear – the size and color selectors
- ▶ Then come the toggles to freeze, fade to black or hide the presentation view, and pause/restart the timer

- ▶ Some people like having support slides after their “last” slide
 - ▶ Advanced topics, bibliography, expected questions, etc.
- ▶ Pressing **Ctrl** + **E** you can define this to be the end slide in the presentation
 - ▶ The slide count in the presenter view gets updated, to give you a better overview of how many slides are left
 - ▶ It also updates the slide you jump to when pressing **End**
- ▶ To exit press **Ctrl** + **Q**

THE END

There are a couple of slides more with some additional information, but we do not want to show them to the audience if they do not ask for them

- ▶ The additional information needed for the presentation (duration, notes, end slide, etc.) is stored in an additional file with extension `.pdfpc`
- ▶ Most of the time this file is automatically handled
- ▶ If you ever need to do changes by hand (e.g. if you modify the PDF after defining the meta-information) it is a text-based format easy to edit

Acknowledgements

- ▶ pdfpc is a fork of pdf-presenter-console
(http://westhoffswelt.de/projects/pdf_presenter_console.html)
- ▶ Many thanks to Jakob Westhoff, the original author!
